

Project name: BG-RRP-6.004-0106 "Technological modernization of processes in Yaitseprom AD"

Final recipient: Yaitseprom AD

Main activity: The project proposal is directly aimed at automation and optimization of production processes in the livestock farm of

"Yaitseprom" AD and the preparation of production for market sales.

The activity is aimed at purchasing 2 pcs. Packaging machine for placing eggs in shells of 30 eggs with a capacity of up to 36,000 eggs / hour together with 2 pcs. System for palletizing eggs in shells - capacity of up to 36,000 eggs / hour, 1 pc. machine type carton (box) expander with automatic bottom gluing and 1 pc. electric forklift type stacker.

Objective: The main objective of this investment proposal is to promote the technological and ecological transition of agriculture, with the main objective being the purchase of tangible and intangible assets for the implementation of activities ensuring the protection of environmental components and mitigating the effects of climate change, introducing innovative production and digital technologies, technologies for production and organization in agriculture, for the automation of work processes.

Expected effect: The following results are expected to be achieved

- Ensuring traceability of operations and management of egg production and packaging processes
- Reducing human labor
- Reducing production costs
- Automating a key process in the production cycle, while reducing egg waste (broken eggs)
- Supporting recovery after Covid 19
- Improving the competitiveness and sustainability of livestock farming.

Total value: 635,958.65 BGN, of which 317,979.33 BGN European funding.
